

KYC VERIFY API

Version 1

CHENOSIS

KYC VERIFY API

- KYC (KNOW YOUR CUSTOMER) VERIFY API compares a subscriber's personal information (such as name, national Identity number and address) with the data held by MTN, according to a supplied phone number. The comparison result is then expressed as a percentage of accuracy for each supplied field. The API consumer can use this information to verify customer's data during the service registration process, order confirmation or shipping details submissions, and warn customers in case of the mismatch.
- The KYC VERIFY API V1 matches the following information against the operator's database:
 - firstName
 - lastName
 - phoneNumber
 - emailAddress
 - nationalIdNumber
 - streetAddress
 - City
 - postCode
 - country

Authentication

The first step in accessing the API is to generate a token through authentication using the login credentials (Client ID and Client Secret key).

Get oAuth Token (request)	Response
<pre>curl -- location 'https://api.chenosis.io/oauth/client/access_token?grant_type= client_credentials' --header 'Content-Type: application/x-www-form-urlencoded' --data-urlencode 'client_id={ClientID}' --data-urlencode 'client_secret={clientSecret}'</pre>	<pre>{ "refresh_token_expires_in": "0", "api_product_list": "[{PRODUCT LIST}]", "api_product_list_json": ["{PRODUCT LIST}"], "organization_name": "chenosis-prod", "developer.email": "{DEVELOPER EMAIL}", "token_type": "BearerToken", "issued_at": "1680501459331", "client_id": "XXXXXXXXXXXXX", "access_token": "XXXXXXXXXXXXX", "application_name": "f278995d-40a1-4f2c-9cd3-a4b61b79e9d0", "scope": "", "expires_in": "3599", "refresh_count": "0", "status": "approved" }</pre>

KYC VERIFY API: REQUEST

Chenosis will pass the following attributes as part of the KYC VERIFY API request

These are the end points that will be used to call the API

- Chenosis Preprod : <https://preprod.api.chenosis.io>
- ChenosisProd : <https://api.chenosis.io>

Attribute	Description	Type	Required	Sample
CustomerId	Customer's mobile number	Number	Yes	
FirstName	Customer's First Name	String		John
LastName	Customer's Last Name	String		Doe
PhoneNumber	Customer Phone Number	Number		27838111512
EmailAddress	Customer Email Address	String		kdizzy@gmail.com
NationalIdNumber	Customer National Identity Number	Number		96061552542343
StreetAddress	Customer Street Address	String		123Tshipa Street
City	City in which the customer is residing	String		Meadowlands
PostCode	Postal Code	String		1852
Country	Country	String		South Africa

Request sample

Name	Description
customerId * required string (path)	Phone number of the customer, the format must be E.123 customerId
body * required object (body)	Request body Example Value Model <pre>{ "firstName": "John", "lastName": "Doe", "phoneNumber": 27650600900, "emailAddress": "john.doe@email.com", "nationalIdNumber": 123456789, "streetAddress": "1st Park Avenue, Mzansi, Johannesburg", "city": "Johannesburg", "postCode": "20200", "country": "South Africa" }</pre>

KYC VERIFY API: RESPONSE

The MTN Opco will retrieve the requested information from the System of Record (SoR) where the following needs to be done:

- Match the requested KYC attributes against the information available from the SoR
- Based on the matching analysis, the API will return a percentage indicating how accurate the requested attributes are to the information

Field name	Description	Type	Required
statusCode	HTTP error code extension.	String	Yes
statusMessage	Response Message	String	Yes
data.firstName	Customer's first name matching %	String	Yes
data.lastName	Customer's last name matching %	String	Yes
data.phoneNumber	Customer's phone number matching %	String	Yes
data.emailAddress	Customer's email matching %	String	Yes
data.nationalIdNumber	Customer's national Id matching %	String	Yes
data.streetAddress	Customer's street address matching %	String	Yes
data.city	Customer's city matching %	String	Yes
data.postcode	Customer's post code matching %	String	Yes
data.country	Customer's country matching %	String	Yes

Json Response sample

```
{
  "customerId": "27835576249",
  "statusCode": "0000",
  "statusMessage": "Success.",
  "transactionId": "rrt-3758331283188140895-b-geu1-9395-81602166-1",
  "data": {
    "firstName": 97,
    "lastName": 97,
    "phoneNumber": 100,
    "emailAddress": 69,
    "nationalIdNumber": -1,
    "streetAddress": -1,
    "city": 97,
    "postCode": 97,
    "country": 96
  }
}
```

Response Codes and Description

The following response codes will be returned codes are part of the KYC verify API.

Response Code	Description
200	OK – Everything worked as expected
400	Resource Not Found
401	Unauthorized
403	Forbidden
405	Method Not Allowed
415	Unsupported Media Type
500	Internal Server error
