

KYC DETAILS API

Version 1

CHENOSIS

KYC DETAILS API

- KYC (KNOW YOUR CUSTOMER) Details API retrieves the customer information held by MTN based on the mobile number provided. It uses the phone number provided in the request payload to check MTN data and returns the customer information. The API consumer can use this information to verify customer's data during the service registration process, order confirmation or shipping details submissions, and warn customers in case of the mismatch.
- The following details are returned:
 - firstName
 - lastName
 - phoneNumber
 - emailAddress
 - nationalIdNumber
 - streetAddress
 - City
 - postCode
 - country

Authentication

The first step in accessing the API is to generate a token through authentication using the login credentials (Client ID and Client Secret key).
